

Michelangelo

TECHNICAL DATA

AIR
100 l/m

VOLTAGE
400 Volt 50 - 60 Hz

POWER
6kw

SIZE
3,77 X 2,10 X 3,00 mt

WORKING AREA
3,10 X 1,10 mt

WEIGHT
1400Kg

PRODUCTION
200/400 pairs/hour

Michelangelo is available in two versions.

The first to cut materials up to 10 mm thick and the second up to 35 mm. Both versions are able to finish the cutting just in a lap around. On this cutting table the material is blocked thanks to the sectorial vacuum table and the pressure exerted by the rollers placed on the sides of the cutting tool. These two combined systems allow a finish of maximum precision, even coupling two or more sheets when it needs to increase the production. It's possible to make excavations, grooves, holes, slots or any other decoration

PRESSURE ROLLERS

CUT PRECISION ON MICRO
0,35mm AND LEATHER

you want. It's also possible to engrave the designs on the film of the leather thanks to special accessories. **Michelangelo** is supplied with a basic nesting. On request it can be equipped with an automatic nesting to detect the perimeter of the leather and of all the defects existing on the surface, thus optimizing the waste of material and the working time. **Michelangelo** was born to satisfy the needs of those looking for a multipurpose table able to

reduce energy consumption and to satisfy all cutting needs of the soles producers such as: micro, leather, cardboard, fibers, tunit, neoprene and so on. The versatility makes Michelangelo very interesting for producers of other product sectors also.
